

Create an index.html page with a heading which says “My Python Code Samples”.

Display an ordered or unordered list of links to another HTML page where you will display your relevant code sample.

There must be at least 5 links on the index.html page

For ex:

This is the index.html

My Python Code Samples

1. [Hello World](#)
2. [Strings](#)
3. [Lists](#)

When a user clicks on any of the link above he/she should go to a different page where relevant code is displayed to the user like below:

Hello World

```
print('Hello World')
```

To display code sample in your HTML user <pre> and <code> tags.
