

Q1) Create a simple form like below and serve it thorough your server. Set the method of you form as **POST** and read the form responses in your server and send back a formatted string back to the browser. Example, "Your name is FULLNAME, email is EAMIL, your message, MESSAGE, Your choice, CHOICE".

Note:

- The form fields below are just for an example, you can change the form fields in any way you like. Just have at least 4 fields in your form.

| | |
|----------------------|--|
| Full Name | <input type="text"/> |
| Email | <input type="text"/> |
| Message | <div></div> |
| Select a Choice | <input checked="" type="radio"/> First Choice <input type="radio"/> Second Choice <input type="radio"/> Third Choice |
| Check All That Apply | <input type="checkbox"/> First Choice <input type="checkbox"/> Second Choice <input type="checkbox"/> Third Choice |
| Select a Choice | <div>First Choice</div> |
| | <div>Submit</div> |
