

In today's CC, your task is to create these buttons by following the constraints/requirements mentioned below:

Constraints/Requirements:

1. Don't use any "button" element. Use only 'a' element.
2. Style all the 'a' element so that those look like buttons.
3. Add a hover state that when user hovers over any of the 'a' element, the overall size of this 'a' element increases.

Note:

- Remember that you should define your CSS in an external file.
- You can expand your creativity. Think of what else you can add in your hover state to make it look cool.
