In today's CC, you need to build a client side search/filter using input from the user.

The user will input any textual input and your page should filter or show only those data points which are relevant.

You can use JSONPlaceholder API to get any resource that is listed there using AJAX.

First name	Last name
Vasya	Pupkin
Kolya	Puhliy
Miha	Beliy
Sergey	Green
Vitaliy	Dev
Lena	Sprite
Sven	Samsung
i am type	what i see
some	text
its not important	what was this containt

Note:

- No embedded JavaScript. Your JavaScript code should be written in a .js file and should be linked accordingly.
- You can design the UI in any way you like.
- Also focus on code readability and proper approach along with usage of ES6 wherever possible.
